

HANDS-FREE LOGIN DEVICE

Reduce labor and increase productivity with Hobart's Hands-Free login device for retail scales

Hobart's Hands-Free login device connects via Bluetooth® to HT Scales for touchless, labor free operator login. Touchless, automatic login allows operators to focus on serving customers more quickly.

When operators are required to log in to the scale at the deli or meat counter, it takes time and effort to navigate through menus and key in their ID number, causing longer customer wait times. With a hands-free Bluetooth enabled device, operators can initiate customer transactions as soon as they approach the scale, minimizing service delays and enhancing the customer experience.

BENEFITS OF OPERATOR LOGIN

- Assess department productivity
- Detect process errors
- Record price & tare changes
- Analyze transaction efficiencies
- Establish employee rewards programs
- Prevent "sweethearting"

BENEFITS OF HANDS-FREE LOGIN

- Automatically log in and out (labor free)
- Reduce keystrokes
- Reduce consumer wait times
- Increase transactional efficiencies
- Messaging and alerts

HOW DOES IT WORK?

HT scales are designed with advanced software that connects via Bluetooth to a login device to eliminate manual operator ID entry. Operators simply clip on the hands-free device and login becomes automatic. When in range, the scale recognizes the hands-free device and automatically logs the operator in to the scale.

More than one operator in range? The scale recognizes and registers the closest device it detects within the login range. This means only the operator at the scale will be logged in. When the operator leaves the detection range, or when a closer device is detected, the scale automatically logs them out.

WHAT ELSE DOES IT DO?

The hands-free login device does more than just provide a labor free login interaction. The device can be configured to generate messages and alerts. For instance, if a scale is out of labels or failed to update, a message will be sent to all hands-free devices within the line-of-site range of the scale.

This allows department employees to know precisely when there is an issue that needs attention and get the scale back up to operation as soon as possible. Additionally, an alert can be sent when the error is resolved, eliminating duplication of efforts.

THE VALUE OF LOGGING IN AND HANDS-FREE SIMPLICITY

- Link transactions to specific times, shifts and personnel for greater insight into inefficiencies and user errors.
- Use the data to create robust process controls to make every day operations easier.
- Establish rewards programs for employees based on productivity.
- Use the Hands-Free device for automatic login eliminating manual steps and speeding up transactions.
- Monitor and track price changes preventing “sweetheart deals” and promoting transparent operations.
- Utilize the messaging system to keep scales running seamlessly in all departments.

HOBART HANDS-FREE TECHNOLOGY IS A WIN-WIN SOLUTION FOR RETAILERS – IMPROVE PRODUCTIVITY AND SERVICE CUSTOMERS MORE QUICKLY!
