# Instructions for Operation and Care of MODEL D-300 SERIES MIXERS Save These Instructions

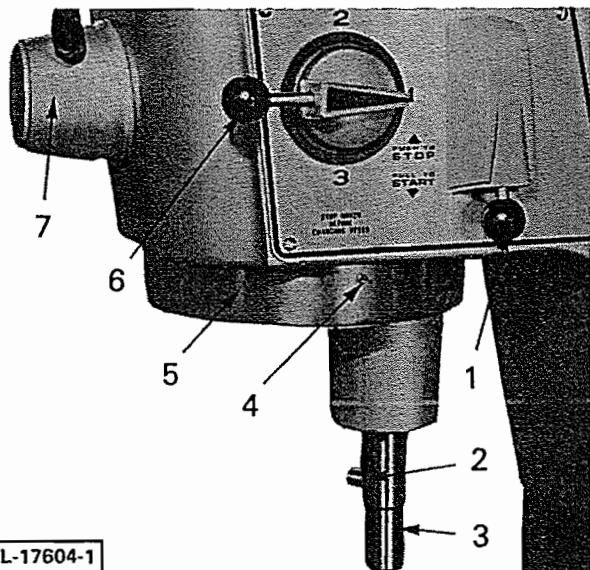

Fig. 1

## GENERAL

The D-300 series mixers have a bowl capacity of 30 quarts. With the use of an adapter and a special agitator, a 20 quart bowl may also be used. The mixer is powered by a 1/2 H.P. motor and is available for single-phase electrical service.

The D-300 series mixers incorporate a #12 attachment hub (7, Fig. 1). Various attachments and accessories available for this mixer include: Model 12 Power Dicer; Model 12 Vegetable Slicer; Model 12 Meat and Food Chopper; Soup Strainer and Colander; Model 12 Speed Drive (for use with Model 12 Vegetable Slicer only); Tray Support; Bowl Jacket; Bowl Truck and Splash Cover.

## INSTALLATION

### LOCATION

Mixer should be placed in a convenient location allowing adequate servicing space on the operational controls side, above and in front of the mixer.

### ELECTRICAL CONNECTIONS

Before making electrical connections, check the specifications on the data plate (2, Fig. 2) to assure they agree with those of your electrical service.

Electrical and grounding connections must comply with the applicable portions of the National Electrical Code and/or other local electrical codes.

**WARNING: DISCONNECT ELECTRICAL POWER SUPPLY AND PLACE A TAG AT THE MAIN CIRCUIT BOX INDICATING THE CIRCUIT IS BEING WORKED ON.**

### BRANCH CIRCUIT SIZE AND PROTECTION

#### DUAL ELEMENT TIME-DELAY FUSE

Volts	Phase	Ampacity	Min. Ckt.	Max. Fuse	60°C Copper Wire Size
115	1	20	20	20	12

#### INVERSE TIME CIRCUIT BREAKER

Volts	Phase	Ampacity	Min. Ckt.	Max. Ckt.	60°C Copper Wire Size
115	1	20	20	20	12

NOTE: The above information compiled in accordance with the National Electrical Code, 1981 edition.

A hole for 3/4" conduit is located at the bottom of the pedestal (3, Fig. 2). Connect the input power

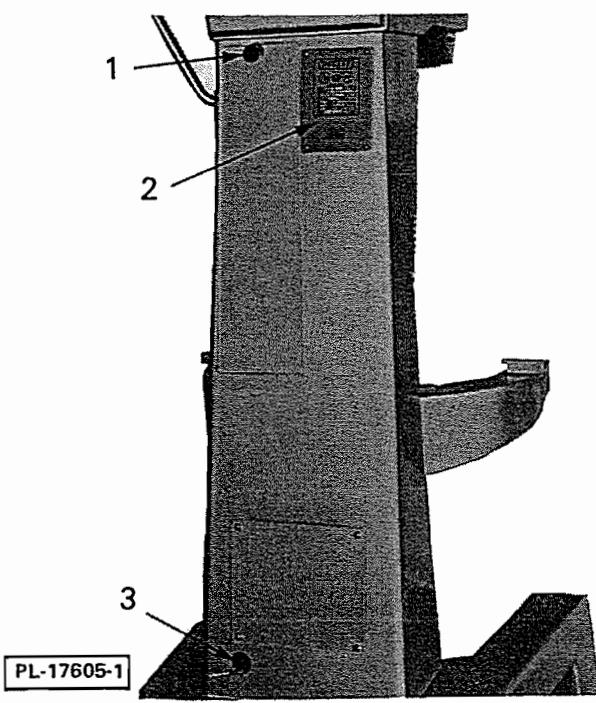

Fig. 2

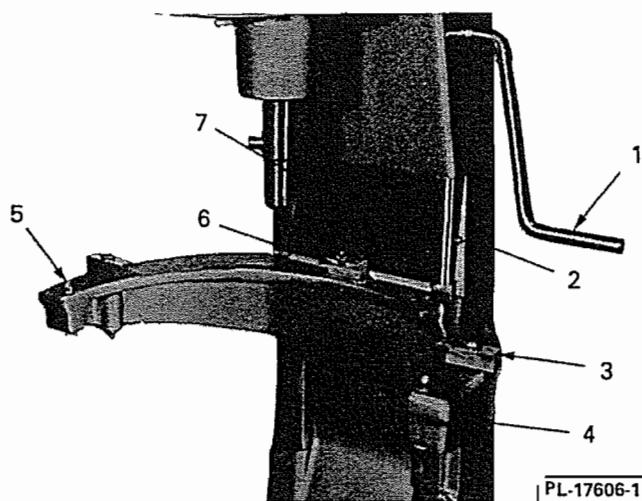

Fig. 3

leads to the pigtail leads from the machine controls. A solderless lug is provided for the service ground.

## OPERATION

### CONTROLS

The D-300 series mixers may be operated in any of three speeds. With the mixer stopped, the speed selection is made by moving the speed selector handle (6, Fig. 1) to the desired speed. Never change speeds while mixer is running.

SPEED #1 is a slow speed for heavy mixtures such as bread dough.

SPEED #2 is an intermediate speed for light dough which must rise quickly or for whipping.

SPEED #3 is a fast speed for light work like whipping cream, beating eggs and mixing thin batters.

### MIXING

Turn power supply to mixer ON. Set the speed selector handle (6, Fig. 1) at the desired speed and pull START-STOP switch (1, Fig. 1) to start machine.

To change speeds, turn the motor off (1, Fig. 1). Allow the planetary to stop rotating. Move the speed selector handle (6, Fig. 1) to the desired speed. Make certain the speed selector handle lines up with the number on the shift selector plate. Never position the handle between numbers. Restart the mixer.

### BOWL LIFT

Pull the lift handle (1, Fig. 3) forward to lower the bowl support (4, Fig. 3). It is necessary to lower

the bowl to change agitators. This also makes the bowl more accessible for filling. When raising the bowl, rotate the lift handle counterclockwise until it touches the stop. To mash potatoes or to cream butter, start with bowl down and raise it slowly into working position while the agitator is rotating.

### BOWL

Lower the bowl support (4, Fig. 3) to its bottom stop. Position the bowl so the square alignment bracket is to the back and sits under the bowl retainer (6, Fig. 3). Locate the alignment pins (5, Fig. 3) into the alignment holes of the bowl. Rotate the bowl clamps (3, Fig. 3) over the ears of the bowl and lock bowl in place by tightening bowl clamp knobs (on bottom of bowl support). New mixer bowls and agitators (beaters, whips and dough arms) should be thoroughly washed with hot water and a mild soap solution, rinsed with either a mild soda or vinegar solution and thoroughly rinsed with clear water BEFORE being put into service.

### AGITATORS

When attaching an agitator, the bowl must be in place on the bowl support and in the down position. Slip the agitator up on the shaft (3, Fig. 1) and turn it until the driving pin in the shaft (2, Fig. 1) reaches the bayonet slot in the agitator shank. Agitators which may be used with this mixer are shown on the last page of this manual.

The style "B" beater is commonly used for thin batters, cakes and mashing potatoes. The style "D" whip is best for whipping cream and beating eggs. Two other styles frequently used are the "ED" dough arm for bread doughs, and the "P" pastry knife for cutting shortening into flour for pastry.

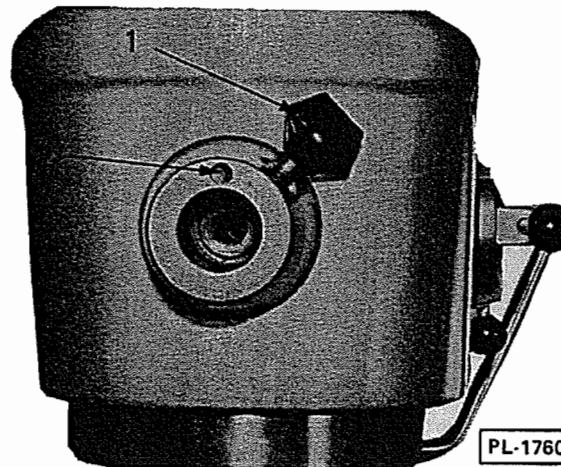

Fig. 4

The "C" wing whip is for heavy whipping, including butter.

## ATTACHMENTS

Insert the attachment with a slight twist to the left so that the stop stud of the attachment is tight against the side of the hole (2, Fig. 4) in the mixer. When in place, tighten the thumb screw (1, Fig. 4). The attachment speed is selected by the speed selector handle (6, Fig. 1). It is RECOMMENDED that most chopping operations be carried out in speed #3.

Use the mixer START-STOP switch to start and stop attachments. Always stop the mixer before changing the speed of an attachment.

The Speed Drive may be used with the Vegetable Slicer to increase the speed of operation. DO NOT use any other attachment with the Speed Drive.

## MAINTENANCE

**WARNING: DISCONNECT ELECTRICAL POWER SUPPLY AND PLACE A TAG AT MAIN CIRCUIT BOX INDICATING CIRCUIT IS BEING WORKED ON BEFORE BEGINNING ANY MAINTENANCE PROCEDURE.**

### CLEANING

The mixer should be wiped down with a damp towel after each mixing operation. The mixing bowl, beaters or attachments should be thoroughly washed and rinsed at the end of each operation.

The mixer and any attachments or accessories used should be thoroughly washed and rinsed at the end of each working shift or whenever the machine is to be out of service for long periods of time (overnight).

### LUBRICATION

#### Motor

The motor has grease-packed ball bearings and requires little attention. The transmission gearing is packed with special grease that will last for several years. When grease is needed for replacement, it should be ordered from your local Hobart Representative.

#### Bowl Slideways

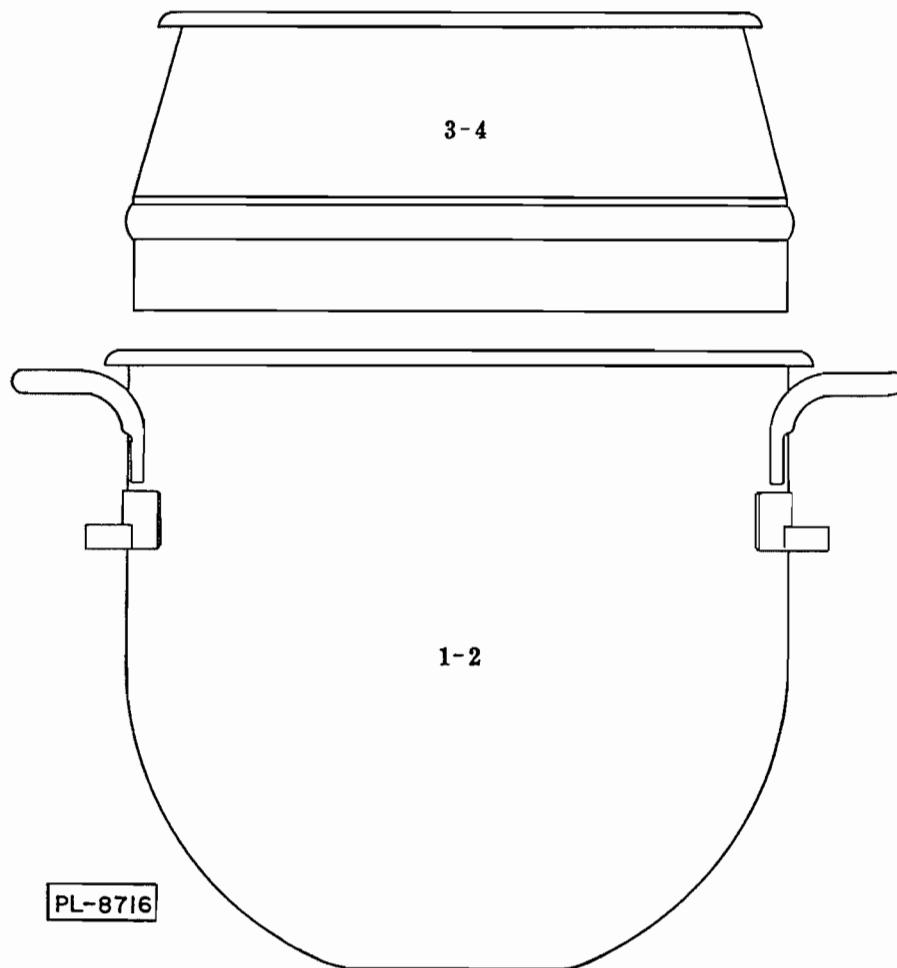

Remove two thumb screws (2, Fig. 3) and lift off apron (7, Fig. 3) to expose bowl slideways. Lubricate slideways by applying a small amount of Lubriplate 630AA (supplied) with the tip of the finger.

#### Bowl Lift

Loosen the access cover knob (1, Fig. 2) and lift off cover. Lightly coat moving parts with Lubriplate 630AA (supplied). Replace cover and knob.

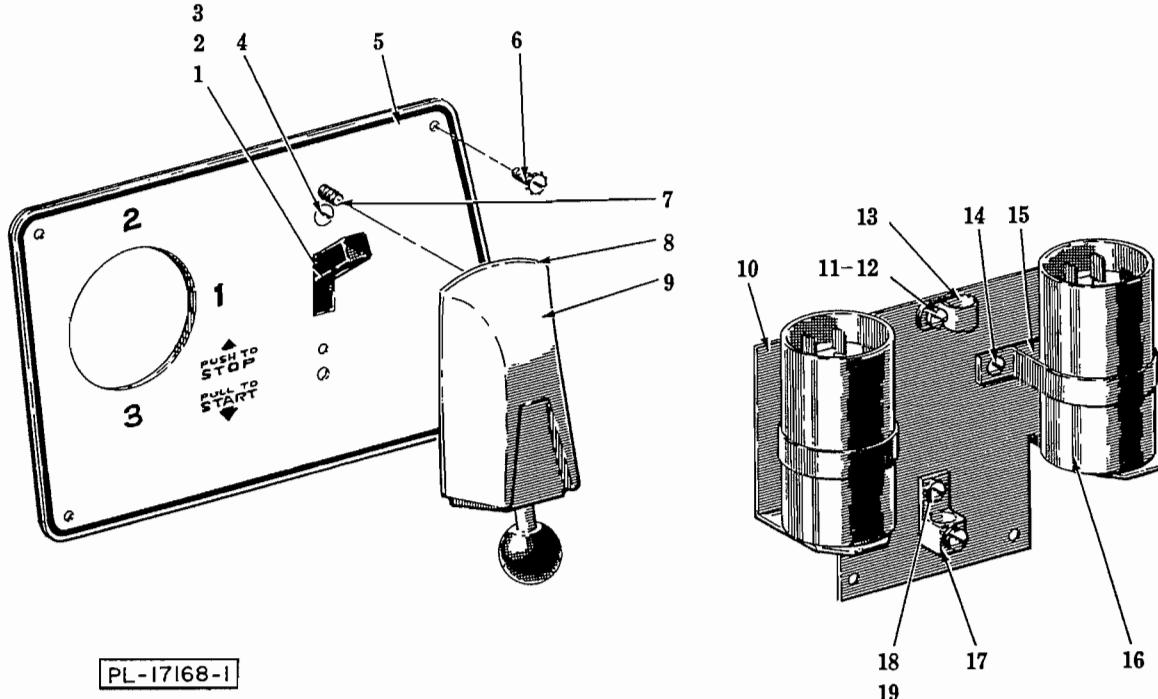

The polished drip cup (5, Fig. 1) is a safe-guard to prevent any lubricant or moisture that may have collected on the planetary from dropping into the bowl. Remove the drip cup (by removing two thumb screws (4, Fig. 1) and pulling straight down) once a month and wipe it clean.
