# Installation, Operation and Care of MODELS M-802 & M-802-U MIXERS

## Save These Instructions

### GENERAL

The M-802 series mixers have a bowl capacity of 80 quarts. With the use of adapters and special agitators, 30, 40, or 60 quart bowls may also be used. The mixer is powered by a 3 H.P. motor and is available for single- or three-phase electrical service.

The M-802-U, which meets USDA requirements, features a burnished aluminum transmission case and chrome-plated top cover, planetary, and drip cup.

### OPTIONS

The M-802 series mixers may be ordered with a #22 attachment hub which will accept any #22 attachment. Various #22 attachments and accessories available for this mixer through Hobart include: Model 22 Power Dicer; Model 22 Vegetable Slicer and Shredder; Model 22 Meat and Food Chopper; Model 22 Speed Drive; Soup Strainer and Colander; Tray Support; Bowl Jacket; Bowl Truck; Splash Cover and Bowl Extension Ring. The M-802 may also be ordered with a 14" taller pedestal.

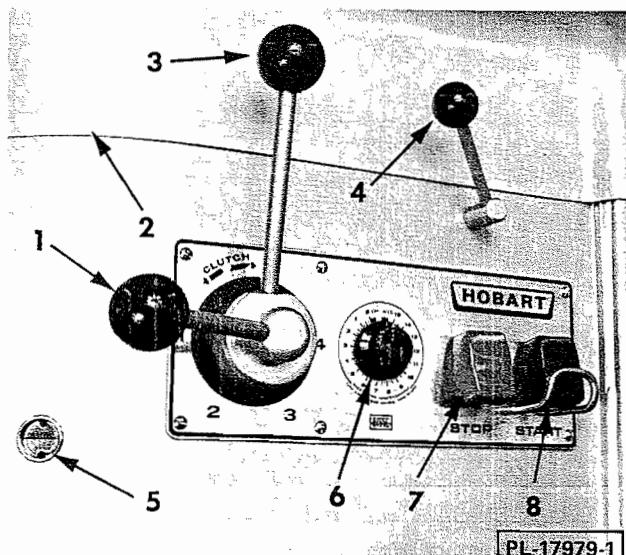

Fig. 1

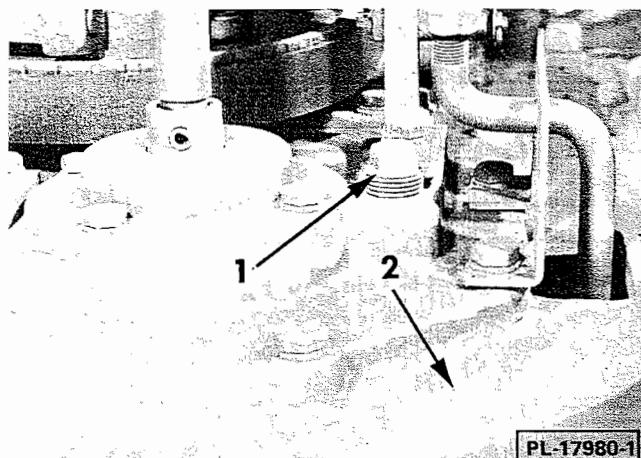

Fig. 2

### INSTALLATION

**NOTE:** Immediately after unpacking, machine should be checked for possible damage. If the machine is found to be damaged after unpacking, save the packing material and contact the shipper.

#### LOCATION

The mixer should be placed in a convenient location allowing adequate servicing space on the operational controls side, above, and in front of the mixer. Holes are provided in the base for permanent bolting to the floor although this is not necessary in normal installations. It is, however, recommended that mixers with the 14" taller pedestal option be bolted down.

#### LEVELING

Once located, the machine must be leveled. Remove the top cover screws and the top cover (2, Fig. 1). Place a level on the machined surface (2, Fig. 2) of the transmission case. Slide shims under the legs of the base as necessary to level the mixer.

#### LUBRICATION

All lubricating oils are drained from the machine before shipping and must be replaced before operating.

**CAUTION:** There are different lubricants for the transmission and planetary. Do not interchange these oils as damage to the mixer may result.

## Transmission

To fill transmission, remove the top cover (2, Fig. 1) and transmission fill plug (1, Fig. 2). Pour the contents of bottle labeled **Transmission Oil**, shipped with machine, into the case. The oil level should be between the center and top of the oil level gauge (5, Fig. 1). If the oil falls below this when the motor is not running, more oil is required. When adding oil, add small amounts at a time and check during operation.

## Planetary

The recommended oil capacity is 5 to 7 fluid ounces. Since approximately 1 ounce remains in the planetary after draining, 6 ounces are shipped with the machine. Use the oil in the bottle labeled **Planetary Oil**.

Remove the planetary fill plug (2, Fig. 3). Check to assure the drain plug (3, Fig. 3) is tight. Slip one end of the tubing (supplied) over the nozzle end of the container labeled **Planetary Oil**. Place the other end of the plastic tube in the planetary and pour entire contents into the machine. Replace the fill plug.

**NOTE:** Additional information on routine lubrication may be found under MAINTENANCE.

## ELECTRICAL

Before making electrical connections, check the specifications on the data plate (2, Fig. 4) to assure they agree with those of your electrical service.

**WARNING: ELECTRICAL AND GROUNDING CONNECTIONS MUST COMPLY WITH THE APPLICABLE PORTIONS OF THE NATIONAL**

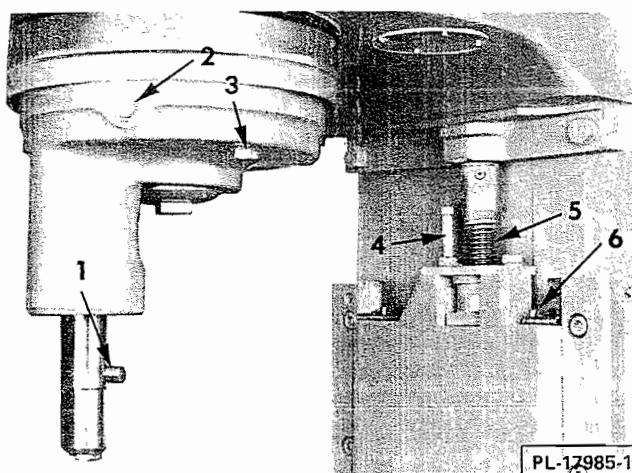

Fig. 3

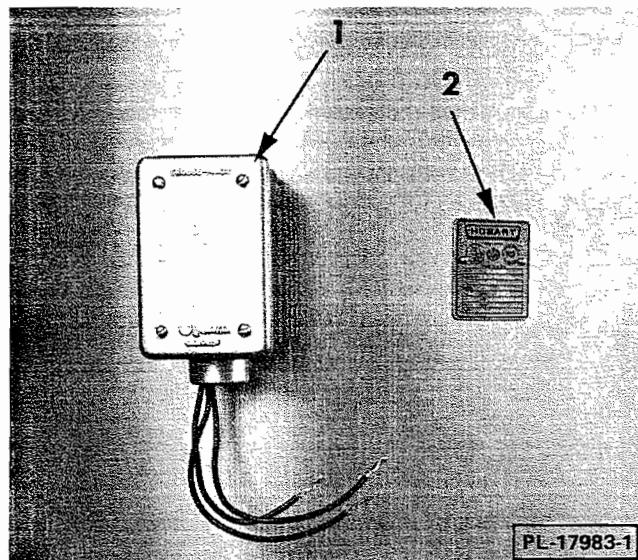

Fig. 4

## ELECTRICAL CODE AND/OR OTHER LOCAL ELECTRICAL CODES.

**WARNING: DISCONNECT ELECTRICAL POWER SUPPLY AND PLACE A TAG AT THE DISCONNECT SWITCH INDICATING THE CIRCUIT IS BEING WORKED ON.**

A hole for 3/4" conduit is provided in the junction box, (1, Fig. 4) located on the rear of the pedestal. Connect the input power leads to the pigtail leads from the motor controller. A solderless lug is provided for the service ground.

### BRANCH CIRCUIT SIZE AND PROTECTION

#### DUAL ELEMENT TIME-DELAY FUSE

Volts	Phase	Min. Ckt. Ampacity	Max. Fuse Size	60°C Copper Wire Size
200	1	35	35	8
230	1	30	30	10
200	3	20	20	12
230	3	20	20	12
460	3	15	10	14

#### INVERSE TIME CIRCUIT BREAKER

Volts	Phase	Min. Ckt. Ampacity	Max. Ckt. Bkr. Size	60°C Copper Wire Size
200	1	45	45	6
230	1	40	40	8
200	3	25	25	10
230	3	20	20	12
460	3	15	15	14

**NOTE:** The above information compiled in accordance with the National Electrical Code, 1981 edition.

Three-phase machines must be connected so the planetary turns in the direction of the arrow (2, Fig. 5). To check the direction of rotation, turn the power disconnect switch ON. Place the speed selector (1, Fig. 1) in #1. Place timer (6, Fig. 1) on HOLD. Energize machine momentarily by pushing START then STOP and verify the direction of rotation.

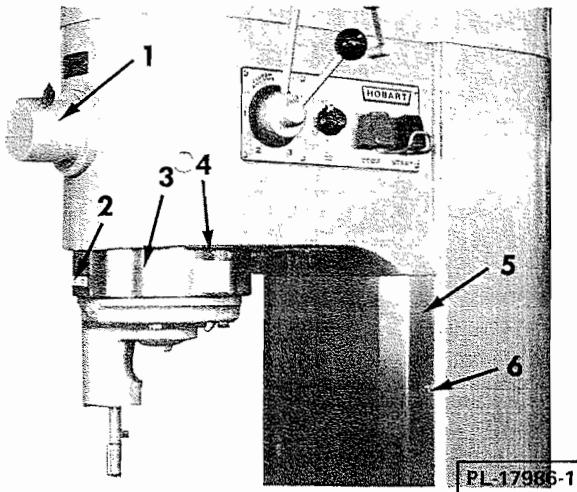

Fig. 5

If motor rotation is incorrect, **DISCONNECT ELECTRICAL POWER SUPPLY** and interchange any two of the power supply leads.

## OPERATION

### CONTROLS

Operational controls include a timer (6, Fig. 1), a START switch (8, Fig. 1), a STOP switch (7, Fig. 1), a clutch handle (3, Fig. 1), a speed selector handle (1, Fig. 1), and a power bowl lift handle (4, Fig. 1).

A brake, which is used to stop the planetary, is actuated by moving the clutch handle to the STOP position. The motor will continue to run with the clutch handle in the STOP position unless the STOP switch is depressed.

### POWER BOWL LIFT

The power bowl lift is used to raise or lower the bowl with the motor running. To use the power bowl lift, move the clutch handle (3, Fig. 1) to the STOP position. Place the timer knob on HOLD and press the START button. Move the power bowl lift handle (4, Fig. 1) from the center neutral position clockwise to raise the bowl or counterclockwise to lower it. An overload slip clutch will ratchet at the top and bottom stop positions to signal end of travel and to protect the operating mechanism.

**CAUTION:** Before lowering the bowl onto the bowl truck, always unlock both bowl clamps (1, Fig. 6).

**NOTE:** On new machines, the power bowl lift handle may need to be manually returned to neutral until parts are broken in.

### BOWL

Lower the bowl lift to its bottom stop. Select an agitator to be used and place it inside the bowl. Position the bowl so the square alignment bracket is to the back and the bowl locating studs (2, Fig. 6) on the bowl support fit into the alignment holes of the bowl. Raise the bowl yoke until the bowl is seated. Lock bowl in place by rotating the bowl clamps (1, Fig. 6) over the ears of the bowl.

**NOTE:** Due to variations in bowls and agitators, it is **RECOMMENDED** that the agitator clearance be checked and adjusted if necessary with every bowl or agitator change. See **ADJUSTMENTS** for recommended procedure.

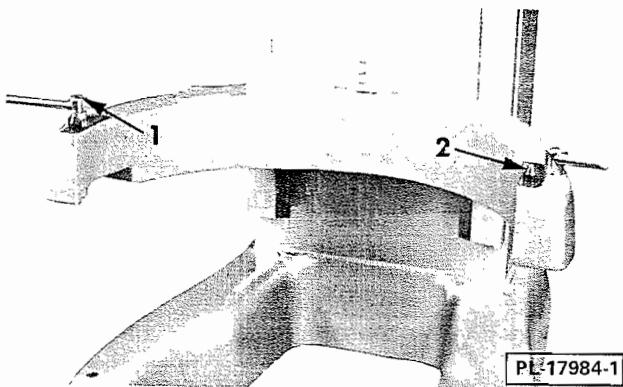

Fig. 6

### AGITATORS

With the bowl in place and the lift at its bottom stop, push the agitator shank up on the shaft and turn clockwise until the drive pin (1, Fig. 3) of the shaft latches in the bayonet slot of the agitator shank. Agitators which may be used with this mixer are shown on the last page of this manual.

When changing agitators during operation, move the clutch handle to the STOP position, lower the bowl, and push the STOP switch. The agitator may now be removed.

### SPEEDS

Speed #1 (Low) is for heavy mixtures like dough, heavy batters, and potatoes.

Speed #2 (Medium - Low) is for mixing cake batters, mashing potatoes, and for developing dough. Speed #3 (Medium - High) is for incorporation of air into light batches. Speed #4 (High) is for accelerated and maximum air incorporation into light batches.

**NOTE:** For additional information on attachment operations and mixing speeds refer to the **Use and Applications Handbook** included with this machine.

## MIXING

For non-timed operation, place the clutch handle in the STOP position and set the speed selector handle (1, Fig. 1) at the desired speed. Set the timer (6, Fig. 1) on HOLD and depress the START switch (8, Fig. 1). Move the clutch handle from STOP to RUN to start mixing. At completion of mixing, move the clutch handle to STOP and depress the STOP switch (7, Fig. 1).

For timed operation, place the clutch handle in the STOP position and set the speed selector handle (1, Fig. 1) at the desired speed. Set the timer (6, Fig. 1) at the desired time (if less than 3 minutes turn past 3 and back to the desired time), and depress the START switch (8, Fig. 1). Move the clutch handle from STOP to RUN to start mixing.

If it is necessary to stop the mixer before timer has expired, move the clutch handle to STOP and depress the STOP switch (7, Fig. 1). The mixer may be restarted by depressing START switch if timer has not expired. If timer has expired, it must be reset before depressing START switch. The clutch handle should then be moved to RUN to start mixing.

**TO CHANGE SPEEDS, DISENGAGE THE CLUTCH** by moving the clutch handle (3, Fig. 1) to STOP position. The brake is automatically actuated. When the agitator shaft has stopped, move the speed selector handle to the desired speed. Make certain the speed selector handle lines up with number on the shift selector plate. NEVER POSITION THE HANDLE BETWEEN NUMBERS. PLACE THE CLUTCH HANDLE IN RUN POSITION TO CONTINUE OPERATION.

## ATTACHMENTS (Attachment Hub Option)

Always place the clutch handle in the STOP position and press the STOP switch before installing or removing attachments.

Install the attachment into the attachment hub (1, Fig. 5) of the mixer. Make certain the square shank

of the attachment is in the square drive of the mixer. Secure the attachment by tightening the thumb screw. Place the speed selector handle at the desired speed. Turn mixer ON and move the clutch handle to RUN to operate attachment. To stop, move the clutch handle to STOP and press the STOP switch.

The meat and food chopper attachment should be operated in speed #3. If bone chips or other material in the cylinder stall the mixer, stop the mixer at once. Do not attempt to restart the mixer in a lower speed. Remove the adjusting ring, knife, plate, and worm and remove the obstruction.

## MAINTENANCE

**WARNING: DISCONNECT ELECTRICAL POWER SUPPLY AND PLACE A TAG AT THE DISCONNECT SWITCH INDICATING THE CIRCUIT IS BEING WORKED ON BEFORE BEGINNING ANY MAINTENANCE PROCEDURE.**

## CLEANING

A kit, including a brush and bowl scraper, is furnished to aid cleaning operations. The bowl scraper with a cloth wrapped around it provides a tool to reach the narrow opening between the bowl yoke and pedestal at the slideways. Other areas may be cleaned by using the brush.

The mixer should be thoroughly cleaned daily. **DISCONNECT ELECTRICAL POWER SUPPLY BEFORE CLEANING.** Do not use a hose on the mixer. It should be washed with a clean damp cloth.

The bowl support apron (5, Fig. 5) may be easily removed by loosening the thumb screws (6, Fig. 5). The inner apron may be removed by removing its screws.

The drip cup (3, Fig. 5) should be removed periodically and wiped clean. It is removed by loosening the two thumb screws (4, Fig. 5) and pulling down.

## LUBRICATION

### Planetary

The oil in the planetary should be checked periodically. Remove the drip cup (3, Fig. 5) by loosening the two thumb screws and pulling down. Remove the fill plug (2, Fig. 3). Oil should be even with the bottom of the fill plug hole. If oil does not run out, slowly add Gearep #85 until it begins to overflow. Replace the fill plug and drip cup.

An oil drain is located at the bottom of the planetary. Should draining be necessary, remove the drip cup and place a suitable catch pan under the planetary. Remove the drain plug (3, Fig. 3). When oil is completely drained, replace the drain plug. Remove the fill plug and replenish with 6 ounces of Gearep #85.

#### Transmission

For correct lubrication, the oil level should be between the center and top of the oil gauge (5, Fig. 1) when the machine is not running. If the oil falls below this, remove the top cover and the fill plug (1, Fig. 2). Pour Gearep #140 into the transmission until oil returns to the gauge line. Replace the fill plug and top cover. Use caution not to overfill the transmission as leakage may result.

#### Planetary Seal

Occasionally, the planetary seal may become dry and squeal during operation. Work a little tasteless mineral oil under lip of seal to alleviate this.

#### Bowl Lift

The slideways and the lift screw should be lubricated about twice a year depending upon amount of use. To reach these areas, loosen the thumb screws (6, Fig. 5) and remove the bowl support apron (5, Fig. 5). Remove the inner apron by removing its screws. Oilers (6, Fig. 3) are provided for lubricating bowl slideways. Lower the bowl support to expose oilers and use Havoline #10 oil. The lift screw (5, Fig. 3) is lubricated by applying a thin coat of Lubriplate 630AA (supplied). Replace the aprons and tighten the screws.

#### ADJUSTMENTS

##### Agitator Clearance

Remove the bowl support apron (5, Fig. 5) and inner apron. Install the bowl and lock in place. Install the "B" beater. With the bowl in its raised position, **DISCONNECT ELECTRICAL POWER SUPPLY.**

The clearance between the agitator and the bottom of the bowl should be no more than 3/32".

Loosen the lock nut, and turn the stop screw (4, Fig. 3) clockwise to decrease the clearance or counterclockwise to increase the clearance. Tighten the lock nut while holding the stop screw.

**NOTE:** It may be necessary to restart the mixer and lower the bowl in order to turn the stop screw counterclockwise.

Operate the bowl lift several times contacting both bottom and top stops. With the bowl lift against the top stop, recheck the clearance to assure correct adjustment.

##### Bowl Clamp

The tension of the bowl clamp is controlled by a spring washer and lock nut. The adjustment is made from the under side of the bowl support. Turning the lock nut clockwise will loosen the clamp and counterclockwise will tighten the clamp.

**NOTE:** If repeated adjustments are required, additional service is indicated. Contact an authorized Hobart Service Representative.

## TROUBLESHOOTING

##### SYMPTOM — Mixer will not start.

##### POSSIBLE CAUSE:

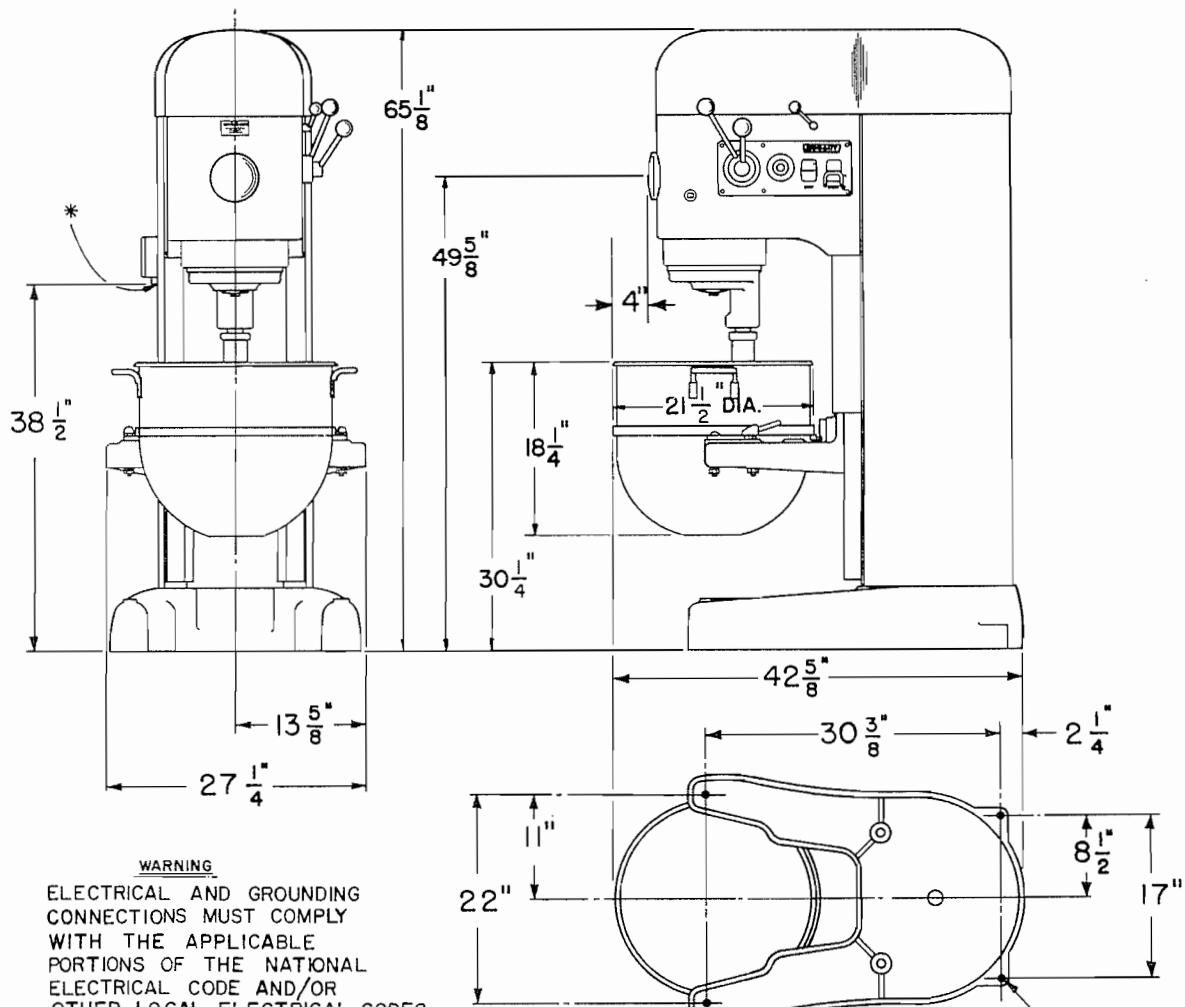

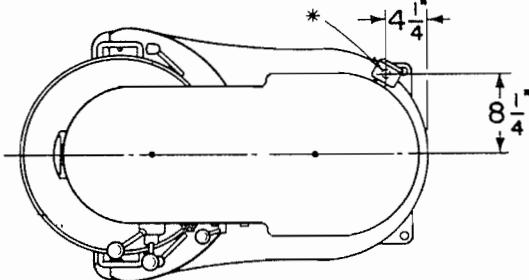

1. Electrical power supply disconnect switch in open position or fuse blown.
2. Mixer or attachment overloaded.

##### SYMPTOM — Agitator touching bowl.

##### POSSIBLE CAUSE:

1. Bowl clamp(s) not closed.
2. Bowl clamp(s) improperly adjusted.
3. Improper agitator clearance.
