

Following you will find instructions on how to clean your Vulcan cooking equipment daily. Always refer to the procedures as instructed in the Installation & Operation manual for your specific model. Manuals may be found by visiting the Vulcan website and clicking on RESOURCES at the top right of the home page.

Always remember that cooking equipment and its parts are hot. Use care when operating, cleaning or performing maintenance. For additional product resources, please visit vulcanequipment.com.

ABC COMBI OVEN

CLEANING THE CAVITY - DAILY:

1. Set temp to **190°F** (default 100% humidity) for 10 minutes to cool & soften grime in cavity before cleaning.
2. Turn unit **OFF** & rinse cavity with **filtered** water from spray hose ensuring all areas are wet (ceiling too).
Note: Use filtered water from the provided combi spray hose when adding water to rice, pasta, grits or any food that needs water for the cooking cycle. NEVER use unfiltered tap water from the sink for cooking or cleaning in the combi.
3. Using a squirt bottle or pump sprayer, apply combi cleaner while the unit is **OFF**. Use appropriate Combi cleaner: <https://resources.itwfeg.com/sites/resourcecenter/vfeg/>
4. Rinse, Rinse & Rinse (Let cavity drain between rinses).
5. Manually wipe down interior door glass & gasket using a soft cloth with mild soap and water, nothing abrasive and no delime chemicals on glass or gasket. Empty and clean drip trays.

DELIMING THE CAVITY - AS NEEDED:

6. Spray inside of the oven compartment with white vinegar or approved deliming product (citric acid mix or combi delimers made of phosphoric acid solution with corrosion inhibitors). **DO NOT USE Hydrochloric or Nitric acid based delimers or ANY cleaner with Chlorine, Chloride, Bleach or Sanitizer.**
7. Let sit for 10 minutes (no heat).
8. Repeat RINSE procedure from Step 4.
9. Leave cavity door open overnight.

Delime proactively before scale compounds into thick layers. If you see it, clean & delime it! If excessive, you may need to improve water filtration. If you see discoloration, corrosion or have questions please contact Vulcan Tech Support as your water or cleaning procedure is not adequate.
